ON-SITE TRAINING

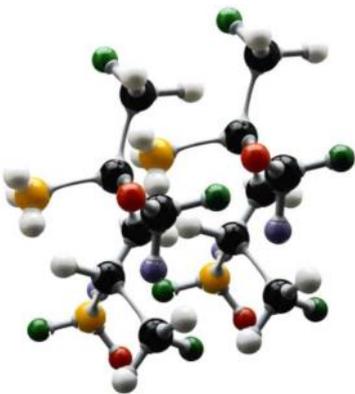

FOR SANDWICH PANEL PRODUCTION LINES

Description:

After visiting and assessing over fifty sandwich panel production lines worldwide, we have identified numerous gaps in terms of training. Leveraging our extensive experience in this field, we offer a two-part training program at your production site. The training covers the fundamentals of polyurethane chemistry and the production line.

This highly detailed training takes place in a conference room with video projection and includes visits to the production line. The aim is to establish a connection between your process and the ideal theoretical process.

Along with the training, you will receive a 100-page guide that will accompany you throughout your career.

USEFUL INFORMATION

Our offices are open Monday to Friday from 8am to 18pm. Outside these hours thank you for contacting us by e-mail, we will respond quickly.
